

Project Introduction

Treehouse is a decentralized application introducing two key primitives for fixed income in digital assets: [tAssets](#) and [Decentralized Offered Rates \(DOR\)](#).

tAssets are next-generation liquid staking tokens (LSTs) designed to optimize yield through interest rate arbitrage, while helping unify fragmented on-chain interest rate markets.

DOR provides a decentralized benchmark rate system, addressing manipulation risks and centralization concerns found in traditional systems like LIBOR and SOFR. It enables the formation of a forward-looking interest rate curve through a novel, consensus-driven mechanism.

tAssets

tAssets represent an “LST 2.0” model, earning yield beyond the native PoS rate via interest rate arbitrage strategies. The first product, tETH, is live on Ethereum mainnet using Lido’s wstETH and arbitraging across top lending protocols like Aave and Spark.

tAssets also serve a critical role in the DOR ecosystem – they can be staked by participants (Panelists and Operators), who are subject to slashing if they submit faulty data. In return, they earn additional yield from query fees paid by users.

DOR

DOR is Treehouse’s decentralized reference rate system, enabling reliable and censorship-resistant benchmarks for DeFi financial products. Deterministic rate predictions are submitted at regular intervals, aggregated via consensus to form a forward rate curve.

The DOR ecosystem consists of five stakeholders.

- **Operators** manage DOR feeds and maintain system uptime

- **Panelists** submit rate forecasts and market data
- **Referencers** build financial products (e.g., rate swaps, fixed lending) using DOR
- **Delegators** stake with Operators and Panelists, supporting governance and earning rewards
- **End Users** benefit from new DeFi primitives powered by transparent and decentralized rate infrastructure

Together, these stakeholders create a participant-driven economy, ensuring transparency, decentralization, and efficiency in on-chain financial markets.

Tokenomics

The Treehouse Token (TREE) serves both utility and governance purposes within the Treehouse platform. By aligning the interests of users, holders, and the development team, TREE plays a crucial role in driving the growth and sustainability of the Treehouse ecosystem.

Key utilities for the TREE token include:

1. **Querying Fees:** All referencers must pay a query fee in TREE to Treehouse stakeholders. This mechanism generates revenue for the ecosystem and ensures the fair utilization of DOR data.
2. **Staking Requirement:** To ensure the accuracy of the panelists' rate submissions and align their interests with the success of the protocol, panelists must stake TREE in order to participate in the DOR rate-setting process.
3. **Protocol Governance:** TREE holders are granted governance rights, enabling them to participate in decision-making processes that affect the protocol's parameters and design.
4. **DAO Grants:** The DAO allocates funds for project partnerships, incentivizing the development of products built on the Treehouse ecosystem.
5. **Consensus Reward Payout:** TREE tokens are distributed to panelists and delegators of the Treehouse-operated DORs for each observation period based on the prediction accuracy of panelists, incentivizing active participation in the consensus mechanism, ensuring the reliability of DOR-derived data streams.

Token Allocation

- **Strategic Investors:** 17.5%
- **Team:** 12.5%
- **Core Contributors:** 5%
- **Treasury:** 12.5%
- **Ecosystem Fund:** 10%
- **Liquidity Provisioning:** 3%
- **Community Airdrop:** 10%.
- **Exchange Partnerships:** 3.75%
- **Future Airdrops:** 5.75%
- **Community Rewards:** 20%

Token Emission Schedule

- **Strategic Investor:** 10% unlocked at the 6-month cliff, then linearly unlocked in equal portions until the 30th month.
- **Team and Core Contributors:** 10% unlocked at the 12-month cliff, then linearly unlocked in equal portions until the 42nd month.
- **Treasury:** Unlock will begin in month 6, then linearly unlocked in equal portions until the 48th month.
- **Ecosystem Funds and Community Rewards:** Linearly unlocked in equal portions over 48 months.
- **Exchange Partnerships:** 2% of the supply will be unlocked at TGE, and the rest will be linearly unlocked in equal portions over 6 months.
- **Liquidity Provisioning, Community Airdrop, and Future Airdrops:** Fully unlocked at the time of their respective airdrop or distribution events.

Roadmap

Treehouse aims to expand its product offerings across markets:

- Launch tAssets on other L1s like BNB and Solana
- Expand tETH to L2s for greater accessibility

- Broaden protocol integrations for tAssets
- Build OTC markets for ETH Staking Rate Forward Rate Agreements (FRA)
- List ESR FRA on centralized exchanges
- Use DOR for CeFi index audits and pursue benchmark licensing
- Launch staking rate feeds on additional L1s
